Warehouse Management System (WMS)

for

SAP Business One

Warehouse Management System (WMS)
for SAP Business One

Overview:

Finally, there is an affordable, full featured Warehouse Management Software (WMS) that was designed specifically for SAP Business One using the SAP SDK. Transactions are real time and no batch processes need to be run. Unlike other WMS systems, the issue of data not being in sync between the WMS and SAP Business One go away.

The LBSi Warehouse Management System (WMS) was developed to provide warehouse inventory and movement transaction functionality in SAP Business One™ that is not included in the standard product. The software further enhances inventory control functions.

Transactions include:

• Transfer Order Build
• Inventory Transfer Requests
• Goods Receipt
• Goods Issue
• Item Bin Count
• Inventory Counting
• Production Receipt
• Production Issue
• Production Return
• Sales Order Build
• Delivery Build
• Reserve Invoice Order Build
• Purchase Order Build
• Purchase Order Receipts

Inquiry Screen/Lookups:

• Item Number
• Bin Location
• Batch Number
• Serial Number

Configuration options:

Since Companies may have unique processes and requirements and as such we offer the ability to configure our WMS to meet your needs.

Warehouse Management System (WMS) for SAP Business One

Options include:

- Ability to hide/display columns on select screens
- Use of serial numbers
- Use of batch numbers
- Clear fields on select screens
- Use of item code, bar code, or Business Partner Catalog on select screens
- Ability to hide/display Menu options

SAP Business One versions supported:

9.0, 9.1, 9.2, 9.3 & 10.0

User authorizations:

Normal SAP Business One authorizations apply for the transact. Example: If a WMS user is to transact PO Goods receipts, then the user needs authorizations for PO Goods Receipts in SAP Business One.

User setup:

All users are required to have an SAP Business One license. An indirect license as a minimum is required. Contact your partner for further information.

SAP Business One Bins:

The use of SAP Business One bins is a requirement when using LBSi WMS. Default bins can be setup for select screens.

Hardware/Software Requirements:

Refer to our WMS Device Requirements for details and specifications as well as some devices used by our clients.

Labels:

All Warehouse Management Systems will require labels that contain the data that is to be scanned. Your vendors may be able to supply labels that contain the data to be scanned or you may already be printing labels internally for purchased and/or manufactured items. We can provide the ability to print labels upon creation of transactions as well as the ability to re-print labels. As label formats and the label printing requirements change from client to client, we can provide estimates to meet your individual requirements.

LBSi has been Helping Businesses Manage for Success since 1989.
